EDUCATION

National University of Singapore

Aug 2023 - Present

Bachelor of Computing in Computer Science

- Focus Areas in Artificial Intelligence and Networking and Distributed Systems
- Graduating in 2027

CERTIFICATES & SKILLS

- Offensive Security Experienced Penetration Tester (OSEP), Offensive Security Certified Professional (OSCP)
- Operating Systems: Kali Linux, Ubuntu, Windows 10, Windows Client, Mac OS
- Administration: Microsoft Active Directory, Microsoft Powershell, Linux terminal
- Frameworks & Libraries: React Native, React, Spring Boot, Google APIs: Maps API & Gemini API

EXPERIENCE

Cybersecurity Engineer (Offensive Security), GovTech Singapore, Singapore

Jan 2026 - Jun 2026

- Developing an AI-assisted framework using LLMs to generate functional MITRE ATT&CK TTP implementations in C/C++ from technique identifiers.
- Implementing a RAG system with Qdrant hybrid search to retrieve relevant TTP source code for improved generation accuracy.
- Building automated compilation and validation pipelines for offensive tooling targeting Windows and Linux.
- Reverse engineering and implementing TTPs including process injection, persistence, and discovery techniques.

Machine Learning Engineer Intern, Elephantech Inc, Tokyo, Japan

Jul 2025- Dec 2025

- Contributed to the development and refinement of machine learning models for high-precision industrial printing systems.
- Applied data-driven approaches to improve spatial accuracy and system performance through model optimization and parameter tuning.
- Worked on algorithms that account for hardware variability and spatial distortions in large-scale manufacturing processes.

PROJECTS/ OTHER COMPANIES

Docket - Blockchain Event Tech Platform (Co-Founder & CTO)

Start-Up

- Built a full-stack multi-tenant SaaS platform on Polygon serving buyers, organizers, admins, and scanners with real-time sync; live with 16 organizers across 5 events.
- Engineered a decoupled mint pipeline using a Postgres-backed retry queue with exponential backoff, returning scanner responses instantly while blockchain writes process asynchronously.
- Integrated Stripe Connect with country/currency-aware payouts, deployed dual ERC-1155 smart contracts, and built a wizard-driven event builder with multi-currency pricing and custom checkout flows.

Boopp - Social Discovery Mobile App (Tech Lead)

Start-Up/ Mobile App

- Tech Lead on Boop, a React Native / Expo social discovery app with a Supabase backend (Postgres + PostGIS, Storage, Realtime, RLS) — owning architecture across geospatial queries, real-time sync, and proximity verification.
- Designed and built the full system from scratch: proximity-verified check-ins, live group albums with multi-user photo/caption sync, friend activity feeds, collectible stamp passports, and an interactive map with auto-expanding PostGIS radius queries.
- Engineered live multi-user group check-ins with photo and caption sync via Supabase subscriptions, plus auto-expanding PostGIS radius queries to handle sparse venue density.

LANGUAGES

- English (Native), Chinese (Spoken & Written), Bahasa Melayu (Spoken & Written), Japanese (Spoken & Written)
